**Subject:** If you have articles that included reference to South Australian water supply please feel free to forward them on.

Dear Corey

In your last correspondence with me about water fluoridation, via email on the 18th of November, 2015, you wrote and I quote:

***"I note that the articles relate to water supply in North America. If you have articles that included reference to South Australian water supply please feel free to forward them on."***

Well you asked for it, here's some information from **"South Australia's" University of Adelaide** and please take note of the dates of the articles.

### **Fluoridated water puts Australia's children in top 10 in world dental health**

A new report into water fluoridation and children's dental health shows that children in Australia have better oral health than children in most other countries.

Photo by Bianca de Blok. [Full Image \(73.57K\)](#)

Monday, 17 December 2007

Children in Australia have better oral health than children in most other countries, due largely to fluoridated water, according to new research conducted at the **University of Adelaide**.

A new report into water fluoridation and children's dental health has been released today by the [Australian Institute of Health and Welfare \(AIHW\)](#). The report contains the findings of research conducted by the [AIHW Dental Statistics and Research Unit](#) at the **University of Adelaide**.

"At any given age, in both baby teeth and permanent teeth, children who live in areas with optimal fluoridated water have less tooth decay than those from areas with low fluoride levels," says the report's author, [Mr Jason Armfield](#).

"These differences in disease experience between fluoridated and non-fluoridated areas were as high as 66% for seven-year-olds," Mr Armfield says.

Optimal water fluoridation was associated with better dental health for both five to six-year-old and 11 to 12-year-old children regardless of the socioeconomic status of the area in which the children lived.

<http://www.adelaide.edu.au/news/news23461.html>

Here's another dental article from **South Australia's University of Adelaide**:

### **ADELAIDEAN Study shows clear water fluoridation benefits**

VOL 5 NO 18 OCTOBER 7, **1996** - NEWS FROM THE UNIVERSITY OF ADELAIDE

**Mr Michael Davies, an epidemiologist who is carrying out the work with DSRU Director Professor John Spencer, said the study showed water fluoridation significantly reduced the prevalence of dental decay by 34% in permanent teeth and 44% in infant teeth in contemporary Australian children.....**

<http://www.adelaide.edu.au/script/adelaidean/archive/backissues/Adelaidean-1996-10-07.pdf>

Then there's this article talking about the wonderful **South Australia's University of Adelaide** dental department again, but this time, it's not such great news for us, but it's great news for the dental researchers pockets.

Just another piece of evidence that water fluoridation does not work and they, the researchers can make up all the excuses under the sun, which they do and with the help of a lot of money, to help explain why this is the case.

## **Aussie children's teeth 'getting worse'**

*Education Reporter Sheradyn Holderhead - adelaidenow*  
**April 14, 2011**

### **AUSTRALIAN children have terrible teeth and their oral health is getting worse, researchers say.**

Dental researchers from the University of Adelaide have been awarded **"\$1.3 million"** to find out why the system is failing Australia's children.

Professor John Spencer from the Australian Research Centre for Population Oral Health will lead a national study over the next four years.

"Despite a substantial level of resources approximately **"\$1 billion dollars annually"** being directed to dental services for children in Australia in the last decade, their oral health is still a major public health problem," Professor Spencer says.

"After several decades of improvement, child oral health has worsened and inequalities have widened."

Latest statistics show that dental restorations and extractions are the most common reason for hospital admissions among Australian children under 14 years of age.

In 2006 nearly 27,000 children 8,114 of whom were pre-schoolers - were admitted to hospital for dental work.

Prof Spencer's team will partner with all eight State and Territory public dental authorities in the research project.

The partners are committing a further **"\$1.7 million"** to the national study, making the total funding for the study **"\$3 million."**

"In this study we will be looking at how dental services for our children are organised and delivered, comparing the use of private dentists and school dental services and the outcomes for child oral health," Prof Spencer said.

"Public programs like the school dental services are not reaching as many children, yet private dental services may be out of the financial reach of many families."

## **Australian Teeth Are Getting Worse And Doctors Need To Join Dentists In Fixing Them**

[Chris Pash](#) Dec 15 **2014**, 12:01 AM  
**BUSINESS INSIDER Australia**

A recent report from the Australian Institute of Health and Welfare (AIHW) found that Australians' dental health has not improved.

There's been a rise in the average number of children's baby teeth affected by decay and an increase in the number of adults reporting adverse oral health.

Nearly half of all children aged 12 years had decay in their permanent teeth.

Over one-third of adults had untreated decay, more than 50% of people aged 65 years and more had gum disease and one in five had complete tooth loss.

Dr Russell said dental and medical professionals need to partner in delivering health care including shared training, recognition of dental services as a part of primary care and the inclusion of dental information on patient records

A Dental Health Service Corps made up of dentists and dental staff, doctors be established.

***“It is time for governments, health professionals, policy makers and community groups to put their money where their mouths are and act together to improve the oral health of all Australians, so that in the future the only gap-toothed Australian smiles are those indicating a visit from the tooth fairy,” Dr Russell said.***

<http://www.businessinsider.com.au/australian-teeth-are-getting-worse-and-doctors-need-to-join-dentists-in-fixing-them-2014-12/>

There's many more pieces of information just like this from the **South Australian** "DENTAL FRATERNITY" contradicting themselves and it's noticeably getting worse all the time now because of people like Erin Brockovich is now involved, along with The Cochrane Review of Water Fluoridation.

Now it seems that the fluoridating countries authorities of the world including South Australia's University of Adelaide's dental dpt, are getting their knickers in a massive knot about it.

***Below you'll find Erin Brockovich's 2015 letter to the US Institute of Medicine and the National Academy of Science***

[https://s3.amazonaws.com/SecureTheRepublic/State%20Documents/Arkansas/279359143\\_Brockovich-Letter-to-US-Natl-Acad-Science-Inst-Medicine.pdf](https://s3.amazonaws.com/SecureTheRepublic/State%20Documents/Arkansas/279359143_Brockovich-Letter-to-US-Natl-Acad-Science-Inst-Medicine.pdf)

The **2015 Cochrane Review of Water Fluoridation**

<https://duckduckgo.com/?q=Cochrane+Review+of+Water+Fluoridation+2015&t=ffsb>

Just as many others like me who are trying to get fluoride out of our water supplies here in South Australia, let alone the rest of Australia's water supplies, we are all very concerned about the **"PROPAGANDA/LIES" & "FLUORIDE FRAUD"** that's being put out into the public domain, hoping that we'll believe them.

Water fluoridation does not work and the above information is proof.

Contradiction after contradiction Corey, year after year, decade after decade.

Now I think that leaders of our communities, the likes of you, should be very very concerned and should now be very aware that this is going on right under your/our noses.

Don't forget Corey, this is directly affecting you, all your family, your friends and colleagues as well.

No-one in Australia's states, which includes South Australia who fluoridate their water supplies are immune from this fraud/poison/toxic waste/slurry that actually comes from the pollution scrubbers of the phosphate fertilizer industry and this is so because once it's in the water supply, it gets into everything.

**Australians living longer but suffering more chronic diseases: Australian Institute of Health and Welfare  
Updated 25 Jun 2014, 11:13am**

Australians are living longer but lifestyle-related chronic diseases are taking an increasing toll, according to the latest report on the nation's health.

"While not solely related to behavioural factors in all cases, they can be heavily linked to **smoking**, physical inactivity, poor nutrition and the harmful use of alcohol," he said.

<http://www.abc.net.au/news/2014-06-25/australians-living-longer-but-suffering-more-chronic-diseases/5548294>

I bet you didn't know that fluoride is in tobacco/cigarettes Corey?

Yellow/brown teeth from smoking, "dental fluorosis" and many South Australians smoke cigarettes Corey and of course no monitoring of people's different exposures fluoride by our medical authorities ever here in South Australia/Australia.

<https://duckduckgo.com/?q=dental+fluorosis&t=ffsb&iax=1&ia=images>

Chronic low/high dose water fluoridation containing fluoride, arsenic, lead and many other heavy metals are accumulative in the human body and that's why many people are suffering chronic illnesses.

Now just ask yourself Corey, what dose of fluoride did you and/or your family members have today/yesterday and are going to have tomorrow and how much does it all add up to in a year?

Nobody has a clue and that includes you, your Dentist/Specialist Physician and or your GP/Rheumatologist anyone else within the medical profession for that matter.

No-one within the medical profession in the whole of Australia is being taught about fluoride poisoning and that's how the fraud has been able to go on for this long.

### **Sugar and fluoride content of various forms of tobacco.**

[J Am Dent Assoc.](#) 1980 Jan;100(1):27-33.  
[Going RE](#), [Hsu SC](#), [Pollack RL](#), [Haugh LD](#).

This may explain the diverse opinions of dental practitioners and investigators relative to the concept that tobacco increases or decreases dental caries.

<http://www.ncbi.nlm.nih.gov/pubmed/6927883>

Oh and you might enjoy reading this.

6 batches of hydrofluorosilicic acid/the actual water fluoridation compound contained "**URANIUM**" from 2006-2010 Corey, yum yum and not to mention all the other heavy metals the likes of Cadmium, Lead, Arsenic etc etc that's contained within this toxic waste/slurry:

### **RAW FLUORIDATION CHEMICAL ANALYSES - FOI - "SOUTH AUSTRALIA" WATER CORP.**

<http://sapphireeyesproductions.blogspot.com.au/>

To me Corey, that old saying springs to mind, "**FOLLOW THE MONEY!!!!!!!!!!**," especially when it comes to water fluoridation.

**"\$1 billion dollars annually"** being directed to dental services for children in Australia **"in the last decade,"** their oral health is still a major public health problem,"

That's **"\$10 billion dollars"** after 10 years by my reckoning Corey.

All this which includes fluoride dental treatments along with water fluoridation.

Something just doesn't add up when all this money is being spent Corey and, "their oral health is still a major public health problem."

### **Aussie children's teeth 'getting worse' - April 14, 2011**
