

30 August 2010

Hon Minister for Health, Nicola Roxon,
Via email nicola@nicolaroxonmp.com

Dear Minister,

Flu/H1N1/Swine Flu – Vaccinations

On 3 August I wrote to you via email on many matters with relation to vaccination and in particular H1N1 Swine Flu Vaccination and to date I have not received an acknowledgement of this letter/email or a response from you or anyone connected with your office.

I appreciate the fact that politicians were working towards retaining their seats in Parliament, BUT at the same time you were still the Minister of Health and as such have a duty of care for the health and safety of the people of Australia.

Friday 27 August 2010

Again we are seeing the hype being shown in the newspaper urging people and once again particularly pregnant women to get themselves vaccinated. See attachment Swine Flu Warning_Herald Sun_27 August 2010

Friday 27 August Again - http://www.naturalnews.com/029586_Australia_vaccines.html

Here we have an article of vaccinations and in particular Australia and this article is circulating world-wide. What sort of impression does this give the rest of the world about the Australian Government and its duty of care of its citizens and in particular its babies and young children?

In particular the following point was made:

“One thing I've noticed about vaccine pushers is that they behave like irrational zealots. No matter how much evidence surfaces about the dangers of vaccines, they continue to mindlessly push them while ignoring the evidence.

A pediatric professor in Australia, Dr Peter Richmond, admitted that researchers were trying to figure out if the entire vaccine was dangerous, or if there was just a bad batch. But even before getting the answer to this question, he goes on to say that everybody over the age of five should go ahead and get injected with this same vaccine! (<http://www.watoday.com.au/wa-news/f...>)

In other words, he's so convinced the vaccine is safe -- even after dozens of children were obviously harmed by it -- that he's still pushing the same dangerous vaccine onto everybody else!

This is precisely the kind of attitude reflected across the vaccine industry. Reports of children being harmed, or paralyzed, or hospitalized by vaccines are always written off as "coincidence." The mounting evidence is simply thrown out the window because it conflicts with the pro-vaccine agenda.”

Sunday 29 August 2010 – http://www.naturalnews.com/029596_vaccines_narcolepsy.html

Here we have Finland suspending H1N1 vaccines after children suffer narcolepsy from vaccinations. When you read further on you find that on 19 August Sweden also started to do an investigation into the vaccinations and narcolepsy.

The article also goes on to say:

“There's no real evidence that seasonal flu vaccines work at all, in fact. Most of the people who get sick every winter, it turns out, are the very people who got vaccinated. That's because vaccines actually weaken the immune system and cause increased risk of future infections. A study published in the journal PLoS revealed that seasonal flu vaccination actually increases the risk of H1N1 swine flu infections (“Does Seasonal Influenza Vaccination Increase the Risk of Illness with the 2009 A/H1N1 Pandemic Virus?” Viboud C, Simonsen L (2010) PLoS Med 7(4): e1000259).

Also see: http://www.naturalnews.com/028538_s...

Rather than protecting the public, seasonal flu vaccines and H1N1 swine flu vaccines actually leave them more vulnerable to future infections. That simple fact, combined with the increasing reports of neurological side

effects being linked to vaccines, should raise serious questions about the reasoning behind any mass-vaccination program."

This information is exactly the same as advised by Professor Peter Collignon of Australia's Infectious Diseases Clinic – that the people who were vaccinated last year if they are unlucky enough to get flu this year – will be the worst hit.

I am aware that Professor Peter Collignon has headed the Infectious Diseases Clinic in Canberra since at least June 1996. Do you not think that this man would have some knowledge of infectious diseases and could in fact be classed as a specialist in the field of infectious diseases? So why is the Australian Government ignoring his advice in this matter?

22 June 2010 by Marc Sircus -

http://www.doctorsaredangerous.com/articles/doctors_and_nurses_love_to_inject.htm

More information on the harm that vaccines can cause. Here is a comment out of this article:

*"Alan Philips, a lawyer very familiar with State vaccine laws, writes, "Health authorities credit vaccines for disease declines, and assure us of their safety and effectiveness. **Yet these seemingly rock-solid assumptions are directly contradicted by government statistics, medical studies, Food and Drug Administration (FDA) and Centers for Disease Control (CDC) reports, and reputable research scientists from around the world.** In fact, infectious diseases declined steadily for decades prior to vaccinations, **U.S. doctors report thousands of serious vaccine reactions each year including hundreds of deaths and permanent disabilities**, fully vaccinated populations have experienced epidemics, and researchers attribute dozens of chronic immunological and neurological conditions to mass immunization programs." But doctors and their nurses still love to inject."*

I too have information pertaining to heavily vaccinated countries and pandemics breaking out of the very illness that the masses were vaccinated for!

My assumption of what we will see happen in Australia in the next few years

I have already read information that is showing that Autism rates are growing and that 1 in every 100 children are showing signs of the Autism Spectrum which covers many disorders like Asperger's Syndrome, ADD/ADHD, etc and it goes without saying Autism itself.

I believe that we are going to see a dramatic rise in these numbers simply because of the adjuvant used in the H1N1 vaccine. It is a known neurotoxin and that it can harm the neurotransmitters that are forming in a foetus during its development. And of course if we didn't get the foetus during its development we can of course target the young infant which is also still in a developing stage of life.

It is my heartfelt wish that we do not see a rise in the number of children presenting with the Autism Spectrum and with this in mind I urge you Minister of Health Roxon to CEASE VACCINATING OUR PREGNANT WOMEN AND CHILDREN with this harmful vaccine until such time as you personally can guarantee the safety of every mother and child vaccinated!

I am sure that if I were to look deeper into this subject I could find many more articles.

PLEASE WILL YOU RESPOND TO BOTH THIS LETTER AND TO MY PREVIOUS LETTER. **I would particularly like answers to the questions shown in red in the letter dated 3 August.**

Yours sincerely,
Marilyn Vine

3 August 2010

Hon Minister for Health, Nicola Roxon,
Via email nicola@nicolaroxonmp.com

Dear Minister,

Flu/H1N1/Swine Flu – Vaccinations

Where do I start?

1. Local South Coast News – 3 August 2010

Today I have listened to a dramatic broadcast from our South Coast local radio with regard to the number of people who have been confirmed as having H1N1 flu. This also included a pregnant woman who has been, I believe, admitted to hospital. The radio station went on to urge all people who have not been vaccinated to get out there quickly and get it done.

I have a strong concern with regard to the urging of people to go and get vaccinated especially when you read the comments in point 2 below.

2. Sunday Telegraph 11 April 2010 – Page 23

In this article we have Professor Peter Collignon – a well respected doctor from the infectious diseases clinic in Canberra who is well positioned to speak on infectious diseases – advising us:

“AUSTRALIANS are being put at unnecessary risk by mass vaccination for swine flu, which is more likely to cause harm than provide protection.”

His alert came as a series of Canadian studies unexpectedly reveal the seasonal flu jab can double the risk of people developing swine flu.

He went on to say:

“We need to have more work done before we roll the vaccine out to the entire population”.

Question Minister Roxon – Has this additional work been done?

Question Minister Roxon – The pregnant woman – was she vaccinated previously with flu vaccines?

3. Email to Members of Parliament Gash, Constance and Kelly dated 6 June 2010

This email covered the corrupt practice of the World Health Organisation with regard to changing criteria to upgrade the status of the pandemic last year.

“(NaturalNews) A stunning new report reveals that top scientists who convinced the World Health Organization (WHO) to declare H1N1 a global pandemic held close financial ties to the drug companies that profited from the sale of those vaccines. This report, published in the British Medical Journal, exposes the hidden ties that drove WHO to declare a pandemic, resulting in billions of dollars in profits for vaccine manufacturers.”

For the full report please go to http://www.naturalnews.com/028936_WHO_vaccines.html

4. CSL Package Insert – Influenza A (H1N1) 2009 Monovalent Vaccine information. – Email to Members of Parliament Gash, Constance and Kelly dated 7 June 2010.

Further information came to hand after I had written to the MPs on 6 June. The following questions were raised with the MPs but to date I have not received a response to these specific questions. I have attached with this email a copy of the CSL Insert.

Minister for Health Roxon – perhaps you would like to answer them?

Question:

1. Can you confirm that **EVERY doctor** and hospital that has administered this vaccine received this document?
2. Can you confirm that **EVERY politician** has read this document?

If you can confirm the above (and even if you can't) then please explain to me the following:

1. Why Federal and State Health Ministers are advocating vaccinating pregnant women, nursing mothers and children under the age of 18?
2. Why are doctors vaccinating these people when the information THAT SHOULD BE IN THEIR POSSESSION clearly tells them not to?
3. Why is the Australian Government advocating the use of a vaccine where the manufacturer clearly advises in 13.1 (page 10) **Carcinogenesis, Mutagenesis, Impairment of Fertility – Neither Influenza A (H1N1) 2009 Monovalent Vaccine nor AFLURIA has been evaluated for carcinogenic or mutagenic potential or for impairment of fertility.**
4. Are you not concerned with the high level of cancer experienced in Australia without vaccinating people with an unproved vaccine that could in fact cause cancer, mutagenesis and impair fertility? Clearly the manufacturer has some concern in this regard or otherwise they would not have covered themselves by inserting point 13.1!

5. Herald Sun – 31 July 2010 – Page 17

Now we are being told that the nation's chief medical officer gave the go-ahead after jabs were suspended because of high rates of bad reactions.

Copy of this article attached.

6. American News - Flu vaccine push already underway; first batch causes seizures in children

Now we are receiving reports from America with regard to seizures in children and for some reasons the Americans appear to be using vaccines produced in Australia by CSL.

"This year's vaccine push has begun with some curious admissions by the vaccine industry, reflected in a Reuters story (<http://www.reuters.com/article/idUS...>). After the usual explanatory text about how flu vaccine manufacturers have started shipping their largest quantity of vaccines ever produced for flu season, the story prints this curious text:

"And U.S. officials said they were changing the labeling on a vaccine made by Australia's CSL Ltd (CSL.AX) because it appears to have caused a higher than usual rate of seizures in children."

Now hold on a second.

If you read between the lines here, this statement implies that: 1) Vaccines cause seizures in children. And then 2) This particular vaccines causes a higher rate of seizures in children than the usual rate of seizures in children.

Why is this curious? First off, because vaccine pushers have always sworn their vaccines caused no seizures whatsoever. No neurological problems. No spontaneous abortions in pregnant women. No increased rates of autism. Vaccines are all perfectly safe, they say, and no children are ever harmed by them.

*That's the mythology, at least, behind vaccines. But the reality is far different: **Vaccines do cause seizures in children**, and this year's vaccines look like they're going to cause a significantly higher rate of seizures than usual."*

It goes on to say:

"Anyway, this Reuters story continues with one more whopper of a statement:

"The labeling for one vaccine, CSL Limited's Afluria, has undergone changes this season to inform health care providers about an increased incidence of fever and febrile seizure... The FDA said it was asking CSL to conduct a study of its vaccine in children."

Read between the lines on this one: This Afluria vaccine causes an increased risk of seizures, it's being

imported into the USA to be injected in children this flu season, and the FDA is just now asking for a study? That means, of course, that **no study has been conducted on this vaccine yet.**"

The full report can be read at http://www.naturalnews.com/029334_flu_vaccines_seizures.html

Question for Minister Roxon – Since last year's vaccination of pregnant women, nursing mothers and infants under the age of 18 years of age – what testing of both the efficacy and safety of this vaccine has been undertaken?

7. The World Health Organisation – India and the Five in one Vaccine

Now we are reading:

"The pentavalent or the five-in-one vaccine that has been recommended in India by the National Technical Advisory Group on Immunization actually killed children in Sri Lanka and Bhutan, warns an article in the latest issue of the British Medical Journal (BMJ).

The report by a group, including paediatricians, professors, health activists and a former Indian health secretary, cautions against the introduction of the five-in-one vaccine that combines antigens against five diseases - diphtheria, pertussis, tetanus (DPT), hepatitis B and Haemophilus Influenzae type B (HIB) - in a single shot.

'Our article describes how the World Health Organisation (WHO), in an elaborate cover-up, changed its own criteria for classifying adverse effects to say the vaccine was not responsible for the deaths in Sri Lanka,' Jacob Pulyel, head of paediatrics at St Stephen's Hospital in Delhi and key author, told IANS.

Former union health secretary K.B. Saxena, professors of community health in Jawaharlal Nehru University in Delhi Debabar Banerji, Imrana Qadeer and Ritu Priya, co-conveners of All India Drug Action Network Mira Shiva and Gopal Dabade and former adviser in finance ministry N.J. Kurian are the other authors of the report. The authors point out that the pentavalent vaccine was withdrawn in Sri Lanka in April 2008 after 25 serious adverse reactions that included five deaths and Bhutan stopped its use within two months of introduction in July 2009 after eight deaths."

Once again we are reading about the wonderful World Health Organisation changing their criteria this time for the classifying of adverse reactions so that a denial can be given that the vaccine caused the problem in the first place!

Read the report - <http://sify.com/news/five-in-one-vaccine-led-to-child-deaths-experts-news-health-kh3oEdecghe.html>

Minister for Health, Nicola Roxon I personally find that what has gone on over the past two years with creating hysteria in people about a Swine Flu Pandemic – which incidentally did not occur and in fact the H1N1 Swine Flu cases were far less than the normal seasonal flu figures – and the intensive advertising program that was conducted to vaccinate pregnant women, nursing mothers and children under the age of 18 years – an extremely distressing scenario.

So much scientific data is out in the world with regard to how people can effectively protect themselves from any sort of flu i.e. ensuring that their uptake of Vitamin D is sufficient. And they would be doing this without the terrible side effects that any vaccine causes. The aim of a vaccine is to over-ride a person's natural immune system thus making them vulnerable to anything and everything that goes around!

The huge amount of money that the Australian Government spent on producing an untested vaccine would have been better spent on providing a good quality educational advertising campaign on how they could increase their Vitamin D uptake.

Today worldwide people are being found to be Vitamin D deficient! We have the world cancer associations to thank for this with their huge slip, slop, slap campaigns. If people went out in the sunshine for 15-20 minutes each day and incidentally in the middle of the day – then maybe we would not have so many Vitamin D deficient people! I am not advocating that people get burnt, but I am advocating that they spend a small amount of time each day in the sunshine to improve their health.

Minister Roxon I look forward to receiving your answers to the questions raised.

Yours sincerely,

Marilyn Vine (Mrs)
Concerned Australian Citizen

PS. Please watch this important discussion between Dr. Mercola and Dr. Connett as to why we need to end water fluoridation without further delay <http://articles.mercola.com/sites/articles/archive/2010/07/03/paul-connett-interview.aspx>

Few will listen,
Of the few who listen, fewer still will understand,
Understanding does not mean believe,
Of the handful who believe, most may not know what to do,
Those who even know, how many will actually do ?
And the rare ones who have done it.....
Need not listen to you anymore.
