Has Baxter International released a biological weapon?

Evidence appears to suggest that Baxter International is responsible for a new deadly outbreak of viral pneumonia in Ukraine.

[In February of 2009](#) Bloomberg reported that Baxter "accidentally" send vaccine material containing both live Avian bird flu and seasonal influenza to multiple laboratories worldwide. A laboratory decided to test the vaccine on it's ferrets, but the ferrets all unexpectedly died. It must be noted that Baxter has made a "mistake" like this before. [Blood products produced by Baxter once containd HIV](#). Thousands of haemophiliacs died due to this, and many went on to infect their spouses.

Later in the year, a bizarre story emerged on the internet. The Huffington Post [reported on a a man named Joseph Moshe](#) who was arrested after a hours long standoff with the police because he had supposedly made threats against the White House. The man was able to withstand multiple rounds of tear gas.

However, the internet community was very skeptical of the true reasons behind this man's arrest. Comments on the Huffington Post website immediately began pouring in about an unreported side to this story, namely that Joseph Moshe was a Mossad Agent specialized in biological warfare who called into a radio show to warn people about a biological weapon that was being made by Baxter international that would be spread through vaccine and would cause a plague upon it's release.

Although anyone can make a doomsday claim and we should never believe anyone (and it must be said that the Truth movement handled this well, the message was spread without being proclaimed as gospel) the amazing part about Moshe's claim was the location where Moshe said the biological weapon was being produced.

Moshe claimed that Baxter's laboratory in the Ukraine out of all places was creating this biological weapon. All of this came out in the beginning of August, which is more than 2 months before the situation that is currently unfolding. For Moshe to correctly name the country where a new epidemic would be unleashed, requires either inside information, or an incredible coincidence as anyone with a basic knowledge of statistics can confirm for himself.

Let us assume for a moment that every person on our planet has an equal chance of giving rise to a new lethal epidemic due to a virus that mutates as it spreads through his body. [The Ukraine has 46 million inhabitants. The current estimated global population is about 6.7 billion.](#) This means that if a new epidemic were to arise, the chance of this epidemic starting in the Ukraine would be 0.69%. [However, it appears that this virus is a form of flu.](#) This makes the odds of being right when guessing that a deadly flu is going to break out in the Ukraine even smaller. The reason for this is that back in early August the vast majority of influenza infections were found in different countries than the Ukraine. [In fact, on 30 Oktober, Earthtimes reported that Ukraine had officially reported only two cases of swine flu, and no deaths, until last Friday.](#) This deadly epidemic appears to have arrived out of nowhere in the Ukraine.

[Moshe's biomed profile appears to confirm his position as a microbiologist.](#) Furthermore, [this page](#) with Baxter's contact information for it's Ukraine office confirms that Baxter has a presence in the Ukraine.

[It must also be noted that massive numbers of microbiologists have been dying bizarre deaths.](#) This case of what appears to be a brave man who sacrificed it all to bring us this message may explain why so many microbiologists have been murdered. The fact that this man managed to predict an outbreak of highly lethal influenza in a place where we would least expect it, 2 months before it a actually occured, lends credence to his claim that Baxter International is responsible for the outbreak and shows that top microbiologists can pose a problem to the people responsible for this ongoing disaster.

This is a developing story, expect to see possible updates on David Rothscum Reports as more information on what is happening in Ukraine becomes available.

Update 1: For the purpose of keeping information from disappearing, I am going to mirror most information I can find on here.

Comments on the Huffington post website on an article about Moshe's arrest documenting his claim that the Influenza virus in a vaccine manufactured by Baxter in Ukraine replicates RNA from the 1918 flu and is meant

as a bioweapon:

Update 2: [The Ukrainian government wants to impose travel restrictions on people across the nation to stop the virus from spreading.](#)

Update 3: According to the Huffington post comments I cited above, Dr. Moshe claimed that the virus used replicated RNA of the 1918 Spanish flu. [Symptoms of the 1919 Flu include victims being drenched in blood:](#)

American were familiar with the flu; it sent you to bed, made you miserable for 3 or 4 days with fever, muscle aches, and congestion, then left you shaky for about a week. It made millions sick, yet killed only the oldest, youngest, and most feeble.

The 1918 influenza was not the flu Americans were familiar with. It was a horror that turned victims bluish-black then drowned them with their own body fluids. the death toll was highest in the ages 15 to 40, those in the peak of health. The victims would be fine one minute and the next incapacitated, fever-racked, and delirious. Temperatures rose to 104-106 degrees, skin turned blue, purple, or deep brown from lack of oxygen. Massive pneumonia attacked the lungs, filling them with fluid; blood gushed from the nose. Death was quick, savage, and terrifying.

[Compare this to reports that are coming out from Ukraine:](#)

Five persons have died from the flu in Lviv, four men and one woman, says emergency hospital chief doctor Myron Borysevych.

Two of the dead patients were in the 22-35 age group, with 2 others over 60. He diagnosed the disease as viral pneumonia.

(...)

Viral tests can last from one to two weeks. They are complicated and not done in Lviv. The course of the disease was very quick. The symptoms included very high temperature and short-wind cough.

(...)

All the six dead young people had symptoms of severe hemorrhagic pneumonia. The disease starts slowly, with temperature rising to 37.2 – 37.3 degrees, slight cough and pain in joints. Nasal catarrh developed at the end of the second or third day. Autopsy revealed that the lungs were soaked with blood, the oblast chief specialist said.
